

EMISSION TRACKING SYSTEM

Emission Tracking System[®]

Emission Tracking System (ETS) is an integrated relational database management system which tracks the chemical usage from permitted processes issued by the State and USEPA. ETS analyzes the data and presents the emission summary reports in the approved format. This software also tracks the compliance status of the facility through integrated analysis of emissions from the processes with Special Permit Conditions stipulated in the permit.

ETS[®] Features

- Easy to use Forms
- Emission Tracking Features
- Compliance Monitors
- Easy to Use Emission Reports Designer
- HAP Emissions Tracking
- Chemical Inventory Tracking Features
- Production Report Designer
- Waste Disposal Tracking System
- Customized Help Files
- Cost-effective Compliance Tool

Permits and Regulatory Coverage

- Title V Permits
- New Source Review (NSR) Permits
- PSD Source Compliance Evaluation
- NESHAP Regulations
- Annual Air Emission Reporting
- SARA and EPCRA Reporting

Partial List of Industries utilizing ETS[®]

- Metal Finishing
- Plastic Processing
- Engine Testing
- Equipment Manufacturing
- Surface Coating
- Electroplating
- Automotive OEMs
- Printing and Publishing
